

Redesigning Privacy with User Feedback: The Case of Zoom Attendee Attention Tracking

Tony W. Li, Arshia Arya, Haojian Jin

UC San Diego

Researchers often attribute privacy issues to the lack of user feedback, but this study shows that **user feedback alone can't help engineers avoid these issues.**

Redesigning Privacy with User Feedback

TL;DR

Researchers often attribute privacy issues in many products to the lack of user feedback.

This study shows that even if you give feedback to developers in advance, it is not easy to avoid these privacy issues.

Zoom Attendee Attention Tracking

The screenshot displays the Zoom interface. On the left, the 'Participants (4)' panel lists: Joshua Jones (Host, me), Aglae Cuevas, Nancy Williams, and Thomas Nguyen. A red box highlights the clock icon next to Aglae Cuevas. A red line connects this icon to a large clock icon in a red box. On the right, the 'Meeting Participants' table is shown. A red box highlights the 'Attentiveness Score' column header, and another red box highlights the '100.0%' value for Tom Leslie. A red line connects the clock icon to the '100.0%' value. The table includes columns for Name (Original Name), User Email, Leave Time, Duration (Minutes), and Attentiveness Score.

Name (Original Name)	User Email	Leave Time	Duration (Minutes)	Attentiveness Score
Tom Leslie	toml@iup.edu	03/18/2020 09:09:34 AM	13	100.0%
Veronica Paz	vpaz@iup.edu	03/18/2020 08:59:48 AM 09:09:25 AM	10	100.0%

Attendee attention tracking

English (Original) 

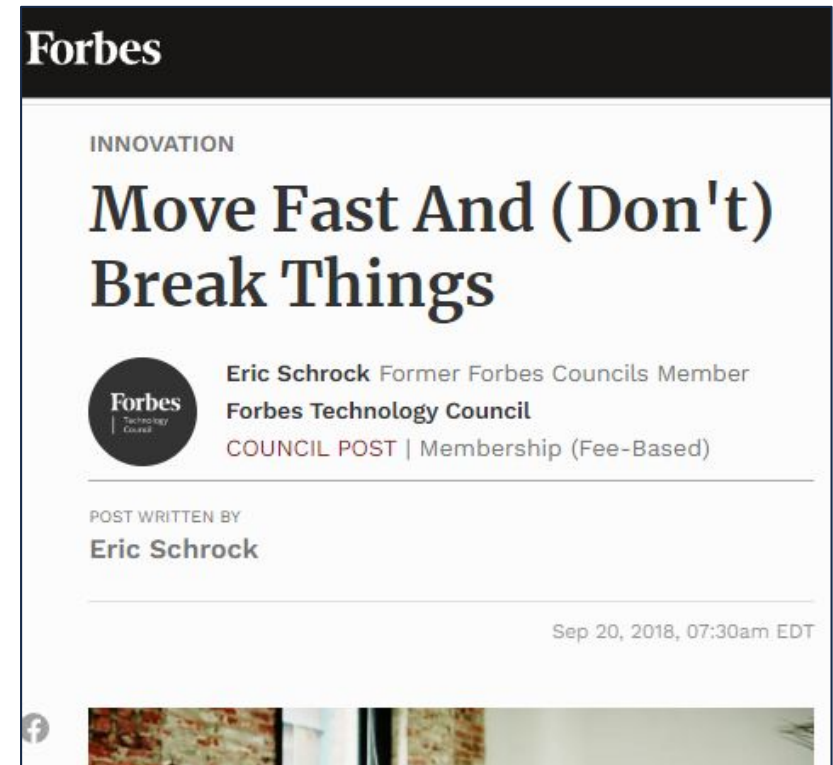

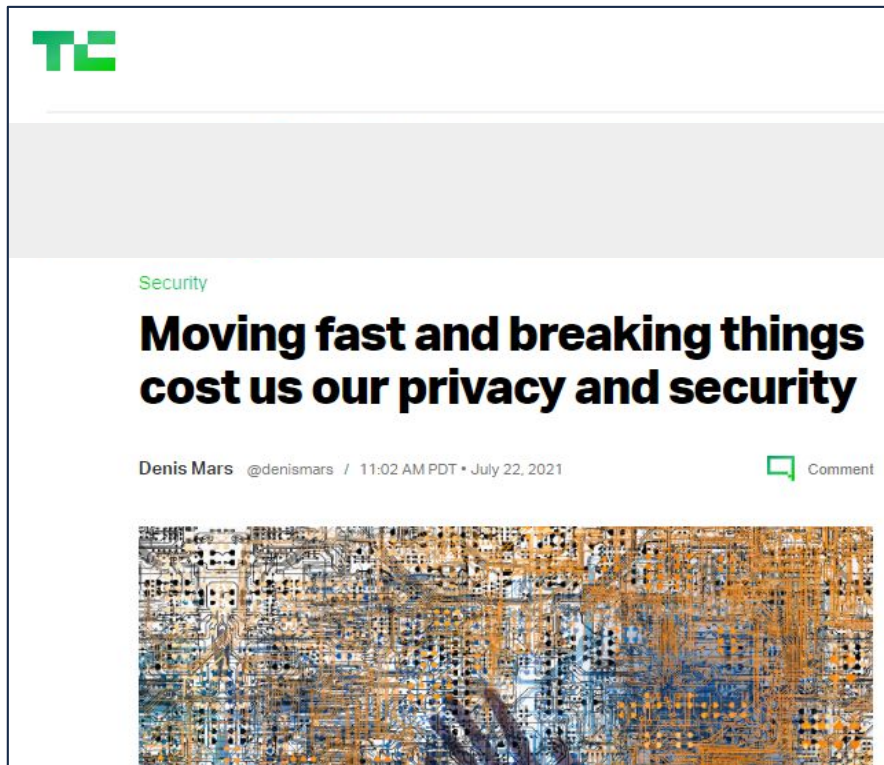

2024-01-11 16:58:20

As of April 2, 2020, we have removed the attendee attention tracker feature as part of our commitment to the security and privacy of our customers. For more background on this change and how we are pivoting during these unprecedented times, please see a note from our [CEO, Eric S. Yuan](#).

 Nancy Williams	Tom Leslie	toml@iup.edu	100.0%	03/18/2020 9:09:34 AM	13	100.0%
 Thomas Nguyen	Veronica Paz	vpaz@iup.edu		03/18/2020 08:59:48 AM	10	100.0%

- RQ: How can **developers** effectively leverage **actual user feedback** to enhance the **privacy** of end user products?

Main Study: Data Collection

Main Study: Data Collection

“We wish Zoom would display a notification or let people on the call see whether it’s enabled.”

“If you have to track people to make sure they pay attention during the meeting, the meeting is pointless and too long.”

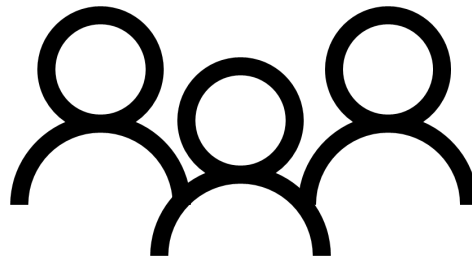

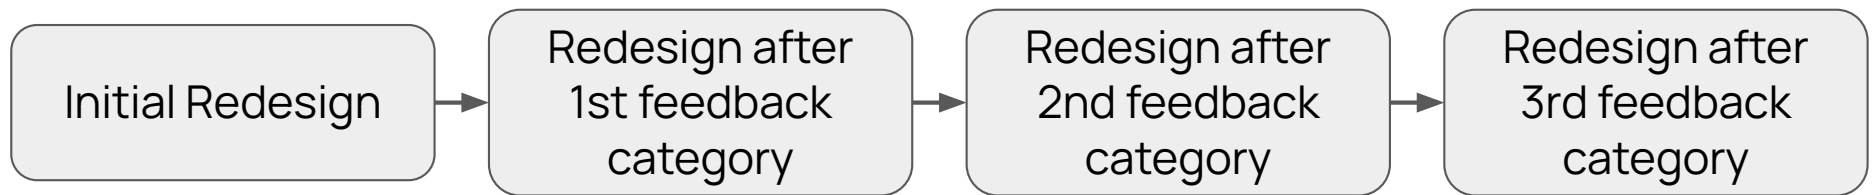

“Everyone in the meeting room, the host, the speaker, and the attendees should be able to see who’s paying attention.”

Cases

Evidence for Organizational
Decisions

Results - Benefits of User Privacy Feedback

“It does give some more weight to have direct user feedback that goes along with [design decisions]. At least I feel that’s how it operates in [my company].”

Evidence for Organizational
Decisions

Results - Challenge 1: Polarized Design Suggestions

Minor frontend changes

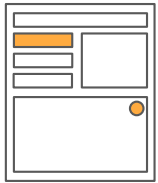

“Instead of saying [attendees are] not paying attention, say they’re not watching their screen, they could still be listening to you.”

Fully deprecate

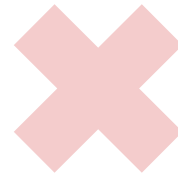

“I think anything that I would propose would be too invasive of privacy, and I would not be comfortable implementing that.”

Results - Challenge 1: Polarized Design Suggestions

Minor frontend changes

“Instead of saying [attendees are] not paying attention, say they’re not watching their screen, they could still be listening to you.”

Fully deprecate

“I think anything that I would propose would be too invasive of privacy, and I would not be comfortable implementing that.”

Results - Challenge 2: Confirmation Bias

Agree - Confidence

“[B]eing able to compare [my design] against real user feedback made me realize it had accounted for a lot of the original feedback, so then it raised my confidence.”

Disagree - Defer/Ignore

“I think I would essentially pass the buck to like PM’s or UX researchers to essentially determine, is that a worthwhile business problem to solve?”

Results - Challenge 2: Confirmation Bias

Agree - Confidence

“[B]eing able to compare [my design] against real user feedback made me realize it had accounted for a lot of the original feedback, so then it raised my confidence.”

Disagree - Defer/Ignore

“I think I would essentially pass the buck to like PM’s or UX researchers to essentially determine, is that a worthwhile business problem to solve?”

Results - Challenge 3: Perceived Responsibility

Usage Out of Scope

“I don’t think we can address sort of, like, how it should be used. But we can provide enough information and enough clarity [...] for users of it to make sort of those decisions kinda outside of the feature.”

Defer to External Priorities

“It depends on who your highest paying customer is and what they want.”

“First, we have to make sure we follow the laws, regulations”

Results - Challenge 3: Perceived Responsibility

Discussion

More **standardized**
protocol and format
for presenting
feedback

Foster developer
empathy with users
and their feedback

User feedback as
evidence to inform
product decisions and
prioritize user concerns

Land Acknowledgement

We acknowledge Hawai'i as an indigenous space whose original people are today identified as Native Hawaiians. We recognize that generations of indigenous Hawaiians and their knowledge systems shaped Hawai'i in a sustainable way that allows us to enjoy her gifts today. For this, we are grateful as guests. Mahalo.

User feedback alone can't help engineers fix privacy issues

- We explored redesigning privacy with user feedback, through the lens of a Zoom feature and historical user feedback
- Benefits of user feedback:
 - Checklists for engineering edge cases
 - Evidence for high-level product decisions
- Challenges of utilizing user feedback:
 - Polarized design suggestions
 - Confirmation bias
 - Limits of perceived responsibility
